

How to Get a Mac as Secure as Possible

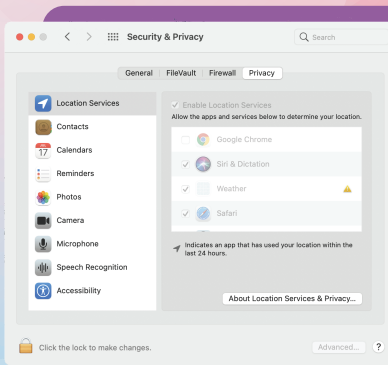

Being one of the most advanced computer devices Mac offers abundant useful security & performance features to users. These devices come installed with the latest security mechanism to keep your data and security intact. It is also a common belief that it is hard to infect a Mac device in comparison to any other system.

1

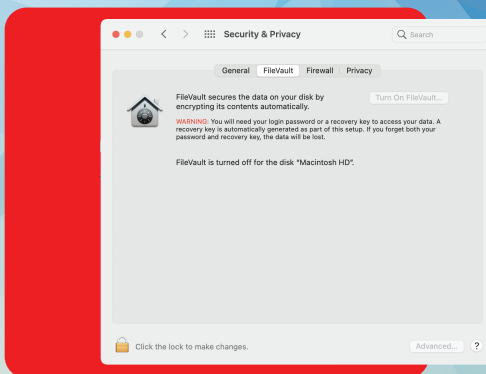

Keep your system up to date, both macOS and installed software

2

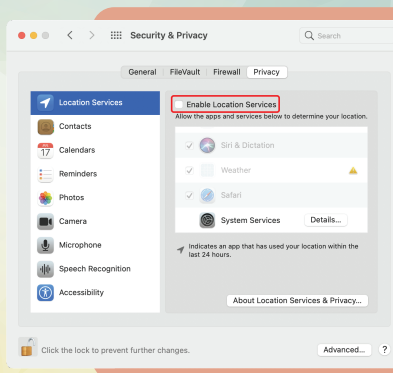

Protecting your privacy

3

Turn on FileVault to encrypt your data

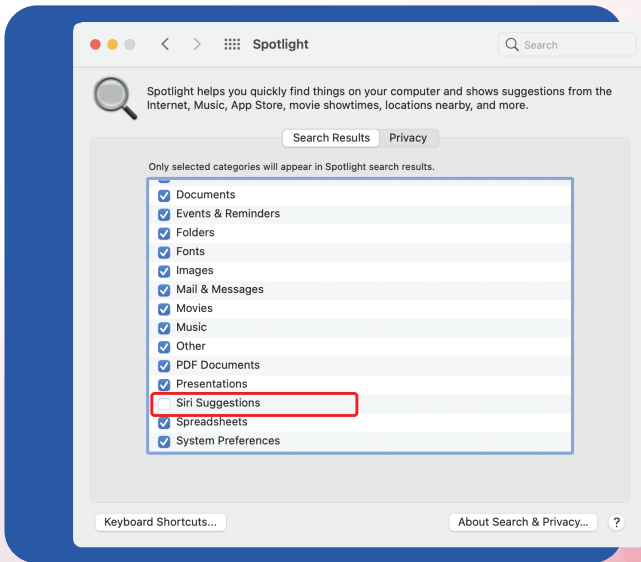

4

Do not share your location with every app

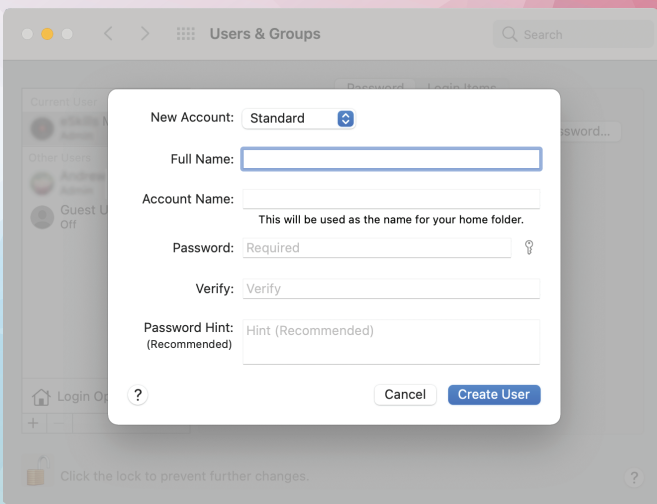

How to Get a Mac as Secure as Possible

5

Stop your Mac's suggestions, uncheck Siri suggestions

6

Set a Non-Privileged Account

7

Use Advanced Mac Cleaner Tools
